

Discover the magic of...

OTK Custom dbInstaller 2.0

For US\$16.80 only

Get it from:

<http://otkretail.blogspot.com>

Complete Automated Deployment Experience

- Easily include in your .NET Setup/Web Setup Project to provide full-fledge application and database deployment automation.
- Automate database deployment tasks such as backup, restore, custom SQL script execution, update application configuration file and more.

Extremely Agile based on Real World Experience

- Show/hide any wizard dialog boxes at runtime based on user knowledge level.
- Provide schedule backup services to your end users who do not have SQL Server Agent, e.g. SQL Server Express. Configure dbI just to run the backup and add the commandline to Windows Task Scheduler.

Cut Down Support Costs and Improve Customer Service

- Provide fixes, upgrades, and data migrations without travelling to user's site by writing your own SQL script file and distribute it together with dbI.
- Configure dbI just to fix your user's application connectionString when the SQL Server has been shifted or reconfigured at user's end.

Play Safe! Database is Crucial!

- Options to backup existing database before install/uninstall.
- Option to DETACH database only instead of DROPPING it.
- Get alerted when you or your users have chosen certain UNSAFE combinations of options.
